Certificate of Conformance

We hereby certify that the Bostwick Consistometer is a product of CSC Scientific and is constructed to comply with the ASTM standard F1080, "A Standard Test Method for Determining the Consistency of Viscous Liquids Using a Consistometer." This test method describes a procedure for the determination of the flow of a standard volume of a semisolid or thick liquid under its own weight.

The Consistometer is made to sit on a bench absolutely level, and there are leveling screws and a level to insure that it does. From there on, it is up to the user to determine his own standards for his product.
